# Welcome

Vaporizing is widely accepted as the Nr. 1 alternative to smoking because it allows you to enjoy herbal blends and extracts without burning them, thus avoiding the inhalation of hundreds of carcinogenic combustion by-products contained in smoke.

The Vaponic Plus is an evolution of the multi-award-winning Vaponic vaporizer. A new, completely redesigned and fully integrated case improves the user experience in many ways: more nature, more safety and more style.

Inside the case you'll find the original Vaponic with all its well-known advantages. It's heated with a simple lighter - preferably a turbo or jetflame lighter - and provides total independence from electricity or digital components. There's no direct contact between the flame and the air you inhale.

The patented double airstream vaporizing system based on heat convection and conduction will allow you to inhale cooled, strong and tasty vapor.

The fact that only safe materials of superior quality are used (Borosilicate 3.3. laboratory glass, stainless steel screens and medical silicone caoutchouc) makes sure that the airpath, the flavor and the vapor are as clean as possible.

The original Vaponic is safely fixed in the case but can easily be pushed out of it when needed, e.g. for cleaning. The case itself is made of three separated pieces of European beech wood connected by solid screw connections made of anodized aluminium.

During usage the case will always cover the hot parts and protect the vaporizer as well as the user. The steel clip and the additional steel pins reinforce the construction and also make sure that the Vaponic Plus can not roll off the table accidentally. The included multifunctional tool can easily be stored and fixed inside the case. A natural oil/wax finish protects the wood and maintains its texture.

The Vaponic Plus kit also includes one spare inner filter, three resin/oil/wax filters and an additional storage tube. A small cotton bag with cord is used as packaging. It's eco-friendly, reusable and makes it easy to keep your things together.

All together the Vaponic Plus is a beautiful piece of European handicraft produced under fair working conditions with a minimized ecological footprint. Attention to detail can be found on every level. It is for sure a very unique and stylish 'vape pen'.

Read and understand this manual before first using your Vaponic Plus. On [plus.vaponic.com](http://plus.vaponic.com) you'll find a video of usage. For more detailed information about the original Vaponic and

additional videos about the multifunctional tool and the cleaning please visit [www.vaponic.com](http://www.vaponic.com) (English, Deutsch, Français, Español, Italiano, Český, 日本の, Português).

The Vaponic Plus has a two-year warranty. Single spare parts can also be ordered. For further details see 'Warranty & Disclaimer' at the end of this manual. Don't hesitate to mail us directly to [info@vaponic.com](mailto:info@vaponic.com) for any doubt or question you may have. Your Vaponic team will do its best to solve your problem. We're proud of our customer service.

1 Vaponic Plus Case

1 Vaponic Vaporizer (inside the case)

3 Resin/Oil/Wax Filters

1 Spare Inner Filter

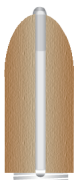

1 Multifunctional Tool  
(Videos on [www.vaponic.com](http://www.vaponic.com))

Start

Unscrew the lid with the clip.

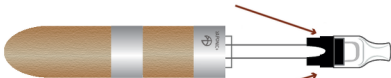

The lid is not needed until the end of the session.

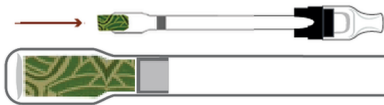

Clip/Keep it in your pocket or put it on the table.

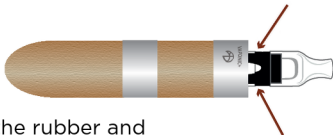

## Loading Dry Leaf

Hold the rubber in order to pull out the inner tube.

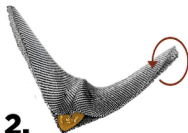

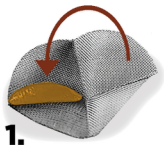

Load the filling chamber with slight pressure. You don't need to grind the herbs. The herbs may not stick out.

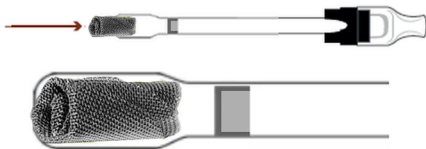

Hold the rubber and push the tube inside.

## Loading Oil, Resin and Wax

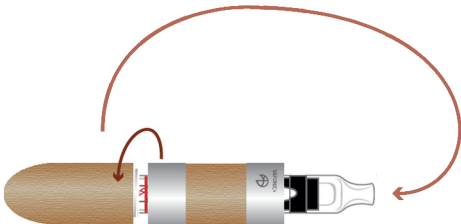

Roll up the load in an oil/wax filter.

Push rolled-up filter into the filling chamber.

## Prepare for Heating

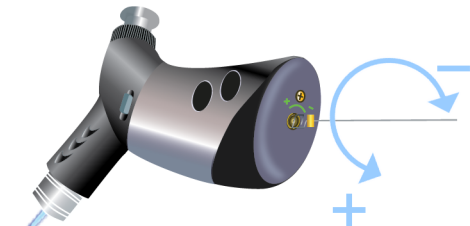

Unscrew the end piece and screw it in on the side of the mouthpiece.

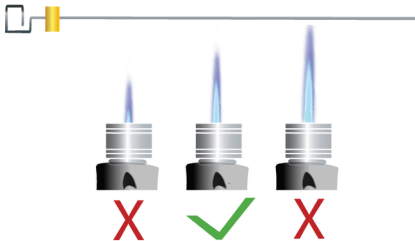

Ready!

## Adjusting the Flame

The level of the flame is important. Use the tool to change the flame +/- . Hold the tool at the wide end next to the screw.

Low flame = longer heating & more control.  
Strong flame = shorter heating & less control.

## Heating

Only heat at the side. Never heat at the outer end of the tube.

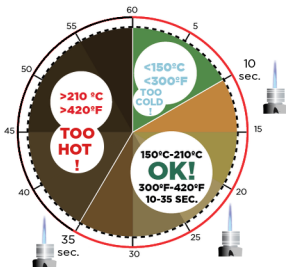

Point below the filter and keep rolling the Vaponic.

**Only heat at the side and never at the outer end of the tube to avoid overheating!**

Observe the load.

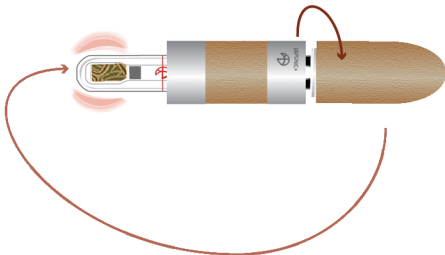

Stop heating when leaf darkens or bubbles surface on oil/wax filter.

Desired temperature: 150-210°C / 300-420°F;  
Optimal heat up time: 10-35 seconds;  
Optimal color: from light to dark brown

## Stop Heating

Do your herbs begin to turn brownish?  
Is the inner tube steamed up?  
Do bubbles surface on the oil/wax filter?  
Have you been heating for 10-35 seconds?

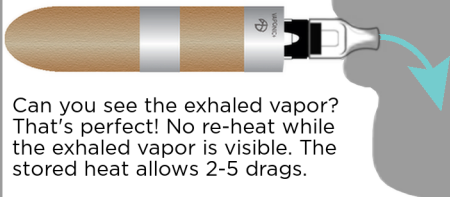

Then remove the flame, unscrew the end piece and screw it in on the side of the hot glass. Ready to vaporize!

## Vaporizing

Use your lips & lungs!  
Close your lips around the mouthpiece and inhale deeply for 4-8 seconds.

Can you see the exhaled vapor?  
That's perfect! No re-heat while the exhaled vapor is visible. The stored heat allows 2-5 drags.

After 2-5 drags the vape has cooled down. You can re-heat for another 2-5 drags. The color and the taste of the load will indicate the end.

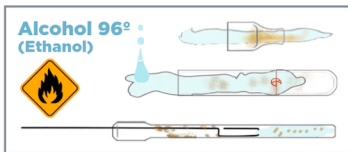

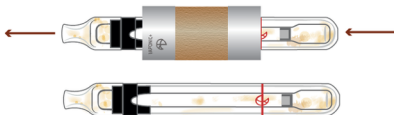

Remove the load with the tool.

# Cleaning

After approximately 10 full sessions.  
The most important is a free air path  
(= clean inner filter).

# Tool Storage

Push the wide end of the multifunctional tool firmly inside the lid until it clamps between the screw and the wood.  
Alternatively use the included storage tube.

## Option 2: Without Case

Push the Vaponic completely out of the case or only use the centerpiece of the case.

## Warranty & Disclaimer

If used as described, the Vaponic Plus has a two-year warranty on the glass pieces, the rubber pieces and the transport case. Damage due to one's own fault is not covered. Please note that the red imprint on the outer tube will withstand heat (avoid direct flame exposure), alcohol and dishwashing detergents amongst other cleansing products. Nevertheless there are cosmetic products (some hand creams e.g.) that can eventually harm the colors. Damage to the imprint is not covered by the warranty.

Components subject to natural wear and tear (e.g. filters) are excluded from the warranty. The dirtying of the filters depends on what you vaporize, which is up to your responsibility. If you want to replace them you can obtain our steel filters as well as any other spare part either from your local store or on [www.vaponic.com/shop](http://www.vaponic.com/shop). Make sure to respect local laws. The producer does in no way encourage or support illegal usage of this product.
